SUMMARY

Backend, Data, and AI Engineer with strong expertise in Python and modern backend frameworks including FastAPI, Django, and Flask, specializing in building scalable, high-performance APIs and backend systems. Proven experience across B2B platforms, e-commerce systems, networking applications, and DevOps-driven environments.

Hands-on experience designing and deploying enterprise-grade AI solutions, including small and medium language model integrations using LangChain, LangGraph, and Azure OpenAI. Strong background in Dockerized microservices, CI/CD pipelines, and cloud-native deployments on AWS and Microsoft Azure.

Demonstrated ability to bridge backend engineering, data workflows, and applied AI, delivering production-ready systems with a focus on performance, security, observability, and maintainability.

TECH STACK

Category	Technologies
Languages	Python (Primary), JavaScript, SQL
Backend & APIs	FastAPI, Django, Django REST Framework (DRF), RESTful APIs, Async API Development
AI / GenAI	LLMs & SLMs, Agentic AI, Agentic RAG, LangChain, LangGraph, Azure OpenAI, OpenAI APIs, Transformers, Prompt Engineering, Tool Calling
Data Engineering	ETL Pipelines, Data Transformation & Normalization, Schema Validation, Batch Processing, Pandas
Databases	PostgreSQL, MySQL, NoSQL
Cloud & DevOps	AWS (EC2, ECS, CloudWatch, VPC, Load Balancing), Azure VMs, VNets, Azure DevOps CI/CD, Docker, Bastion Hosts
Tools & Integrations	Git, LangSmith, Search APIs, Jira, Matplotlib

PROFESSIONAL EXPERIENCE

Q3 Technology Pvt. Ltd. — Senior Software Engineer

Dec 2023 – Present

- Architected and scaled Python-based backend systems using FastAPI, Django, and Flask, supporting Power BI-integrated analytics platforms, SaaS applications, and AI-driven services, improving API response times by 35–40% under production workloads.
- Designed and developed a Power BI management and embedding platform, enabling workspace-level report management, RBAC, dataset refresh monitoring, scheduling, and secure embedding using Azure AD tokens and Power BI REST APIs.
- Built LLM-powered applications using LangChain, LangGraph, and Azure OpenAI, including Volt AI-style document intelligence systems leveraging RAG pipelines and small language models, and Agentic AI workflows (single-agent and multi-agent) for task automation and decision support.
- Developed AI interview bots and conversational agents capable of dynamic question generation, context-aware follow-ups, and evaluation logic using tool calling and memory-based prompting.
- Implemented AI-driven prediction and analytics services using Flask and FastAPI, delivering real-time inference APIs integrated with business workflows and dashboards.

- Designed and optimized Python-based ETL pipelines for transactional and analytical data using Pandas and SQL, supporting reporting and AI feature generation.
 - Engineered and maintained a SaaS work order management platform with JWT authentication, RBAC, workflow orchestration, audit logging, and multi-tenant data isolation.
 - Optimized PostgreSQL and MySQL performance via schema redesign, indexing, and query tuning, improving query efficiency by 30–35%.
 - Led cloud-native deployments across AWS and Azure with Dockerized services, bastion hosts, and secure networking, maintaining 99.9% uptime.
 - Implemented CI/CD pipelines using Azure DevOps and Git-based workflows, reducing release cycles from hours to minutes.
 - Established centralized monitoring and alerting using AWS CloudWatch and Azure Monitoring, reducing MTTR by ~30% while working in Agile/Scrum teams.
-

Chetu Pvt. Ltd. — Software Engineer

July 2023 – Nov 2023

- Designed and developed a web-based Inventory Management System using Django and JavaScript for real-time stock tracking and inventory status management.
 - Implemented CRUD workflows, validation logic, and role-based access controls to ensure data consistency and reduce manual errors.
 - Integrated RESTful APIs and dynamic frontend interactions (JavaScript/AJAX) to support inventory updates, reporting, and search functionality.
-

Infocom Network Pvt. Ltd. (TradeIndia.com) — Software Engineer

March 2022 – July 2023

- Developed and maintained backend APIs and workflows for a B2B trade platform, focusing on inquiry management, lead creation, and inquiry lifecycle processing.
 - Designed and implemented a sales lead architecture to route, enrich, and track B2B inquiries across multiple stages.
 - Collaborated within a cross-functional team of 10–12 engineers to deliver scalable features, code reviews, and production releases.
-

LmwiseMen Pvt. Ltd. (BusinessWise.com) — Consultant

Sep 2021 – Feb 2022

- Owned and implemented the end-to-end backend architecture, developing RESTful APIs, core business logic, and integrations.
 - Designed and managed Elasticsearch-based search and data retrieval pipelines for fast and relevant business data discovery.
-

KEY PROJECTS

Power BI Analytics & Report Management Platform

- Built a backend platform to manage Power BI workspaces, reports, datasets, and refresh schedules with secure embedding and RBAC.
- Integrated Power BI REST APIs with Python services for report lifecycle operations and analytics.
Tech: Python, FastAPI, Power BI REST APIs, Azure AD, PostgreSQL

Volt AI – Document Intelligence Application

- Developed an AI-powered document intelligence application using small language models for secure document ingestion, semantic search, and contextual Q&A.
- Implemented RAG pipelines, vector-based retrieval, and prompt orchestration.
Tech: Python, LangChain, Vector Databases, RAG, Azure OpenAI / OpenAI APIs

AI Interview Bot Platform

- Designed and implemented an AI interview bot with dynamic question generation and adaptive multi-turn conversations.
- Built backend APIs for conversation state, evaluation logic, and scoring workflows.
Tech: Python, FastAPI, LangChain, LLMs, Prompt Engineering

Prediction & Analytics API (Flask Application)

- Developed a Flask-based prediction service exposing REST APIs for real-time inference.
- Focused on API performance, validation, and error handling.
Tech: Python, Flask, REST APIs

SaaS Work Order Management System

- Engineered a multi-module SaaS application to manage work orders and operational workflows.
- Implemented secure authentication, scalable APIs, and relational data modeling.
Tech: Python, Django, PostgreSQL, REST APIs

EDUCATION

Bachelor's Degree in Electrical & Electronics Engineering

Dr. APJ Abdul Kalam Technical University | Aug 2015 – May 2019
