

PROFESSIONAL SUMMARY

- Overall **12+** years of experience in IT Industry with **6+** years into Data Engineering and Analytics.
- Experienced in using GCS, BigQuery, Airflow/Composer, IAM, Pub/Sub SQL, Python Scripting, SDK, Cloud Shell, GSUTIL, gcloud function, BQ commands in GCP Environment.
- Created and managed Google Cloud Storage (GCS) buckets and objects for efficient storage and retrieval of data.
- Created and maintained BigQuery datasets, tables, and views, ensuring proper data organization and accessibility for stakeholders.
- Developed SQL queries to extract, transform, load, and analyze data from various source systems.
- Designed and implemented complex workflows using Apache Airflow/Google Cloud Composer to orchestrate and schedule data pipelines.
- Developed and maintained Airflow/Composer DAG's (Directed Acyclic Graphs), defining dependencies and task sequencing for efficient data processing. Worked with various file formats like CSV, JSON, Avro, Parquet.
- Optimized existing models in Hadoop using Spark Context, Spark-SQL, Data Frames and Pair RDD's.
- Experience in migrating on premise ETL's to GCP using cloud native tools such as BIG query, Cloud Data Proc, Google Cloud Storage and Composer.
- Extensive experience with Data Analytics Visualization, Power BI Reports and Dashboards, M and DAX .

SKILLS

- | | |
|----------------------|--|
| • Cloud Technologies | : GCP (GCS, BigQuery, Pub/Sub, DataProc, Dataflow) |
| • Databases | : Oracle, MySQL. |
| • Languages | : Python, SQL, PySpark. |
| • Data Formats | : XML, JSON, CSV. |
| • Reporting Tools | : Looker Studio, Power BI. |
| • Other Technologies | : Cloud Composer (Airflow), Azure Fabric. |

EDUCATION

B.Tech (Computer Science), Gurunanak Engineering College.

WORK EXPERIENCE

TREDENCE ANALYTICS

08/2024 – Till Date

Cloud Data Engineer

Client : Procter & Gamble (P&G)

Project : Data Ingestion

Project Description: The main goal is to collect, process, and store data from different sources (databases, APIs, flat files, logs, etc.) into a centralized warehouse (BigQuery) for analytics, dashboards, and reporting.

Responsibilities:

- Designed and implemented scalable data ingestion pipelines on GCP using Cloud Storage, Pub/Sub, Dataflow, and BigQuery.
- Automated batch and real-time ingestion from multiple sources such as APIs, flat files, relational databases, and application logs.
- Performed data transformation, cleansing, and enrichment using Dataflow/Dataproc to ensure quality and consistency.
- Interacting with clients to gather, analyze, and document requirements, while planning and strategizing effective solutions to achieve their business objectives
- Managed data orchestration and scheduling with Cloud Composer (Airflow), including retries and alerts for failures.
- Implemented monitoring and logging using Cloud Monitoring and Logging for pipeline reliability and error handling.
- Collaborated with stakeholders to define data requirements, validate business rules, and deliver dashboards for analytics. Applied cost optimization strategies such as lifecycle policies, partition pruning, and query tuning in BigQuery.

Client : AL Nahdi

Job Title : Cloud Data Engineer

Project description : Built a data pipeline with Azure Fabric, SQL, Python, and PySpark to process pharmacy data for reports, compliance, and sales insights. Used Unity Catalog for governance, security, and lineage, and analyzed user actions (sales, clicks, offers) to create personalized promotions and strategies.

Responsibilities:

- Connect to multiple sources like SQL databases, APIs, flat files, and logs, then move the raw data into Azure Data Lake/Storage for further processing.
- Automate and schedule ETL pipelines to run batch and incremental loads, with monitoring, retries, and alerts for failures.
- Use mapping data flows or integrate with PySpark/Databricks to clean, transform, and load curated data into BigQuery / Synapse / other warehouses for analytics and reporting.
- Built and optimized PySpark jobs for large-scale data processing and performance tuning.
- Wrote advanced SQL queries for data validation, reporting, and business rule enforcement.
- Analyzed user actions (sales, clicks, offers) to generate insights and support personalized product promotions.
- Ensured data security and compliance (HIPAA/GxP) by implementing proper access controls and encryption policies.
- Monitored and maintained pipelines using logging, alerts, and error handling to ensure high data quality and reliability.

GROUPM NEXUS GLOBAL

07/2023 – 08/2024

CLOUD ENGINEER

Client: Uber

Project: Data Ingestion & Data Analytics

Project Description: Uber Technologies, Inc., commonly referred to as Uber, is an American multinational transportation company that provides ride-hailing services, courier services, food delivery, and freight transport.

Responsibilities:

- Assumed responsibility for the creation and management of GCS buckets, guaranteeing secure storage and well-organized arrangement of project data to facilitate easy access and efficient handling.
- Collaborate with cross-functional teams to design and implement data processing pipelines, ensuring seamless data flow and integration across platforms.
- Provide expertise and guidance on best practices for data management and analysis within the GCP ecosystem, driving continuous improvement and optimization.
- Facilitated conflict resolution and consensus-building among team members to ensure smooth collaboration and effective problem-solving.
- Conducted post-project reviews to evaluate project outcomes, identify lessons learned, and implement improvements for future projects.
- Responsible for handling team coordination and stakeholder communication, ensuring timely monitoring of day-to-day task completion, and preparing comprehensive end-of-day reports for management to track progress and performance.

CAPGEMINI

Associate Consultant | 05/2021 - 05/2023

Client: 3PM

Project: POS Data Analysis

Project Description: Product line Profitability Dashboard, 8D, and Migrations from Qlik Sense to Power BI application reports.

Responsibilities:

- Design, develop and test Power BI Applications integrating reporting components from multiple data sources. Experience using Power BI as a primary analysis and visualization tool
- Experience in developing queries and consuming data from Azure, SQL, or similar tools, actively working with the data in Power BI. Interact with business stakeholders/partners to understand their business and reporting needs, including critical metrics and KPIs
- Transform business requirements & wireframes into guided analytics prototypes to provide business and data insights
- Experience in integrating/embedding reports into applications with role/row level security
- Work closely with Advanced Analytics team to provide input on appropriate solutions to meet business requirements. Work with current reporting standards and processes
- Provide daily support for reporting systems, which includes maintenance and enhancements to reports and dashboards as well as responding to assigned tickets, troubleshooting and final resolution.
- Strong in publishing reports to app.powerbi.com and setting up the necessary connection details and scheduling.

COGNIZANT TECHNOLOGY SOLUTIONS

SPE | 10/2018 - 05/2021

Client: Google

Project: Voice of Customer Data Ingestion

Responsibilities:

- Experience in GCP Dataproc, GCS, Cloud functions, Big Query.
- Imported data from different source systems to HDFS and perform data cleansing, data modelling and data transformations. Process and load bound and unbound Data from Google pub/sub topic to Bigquery using Cloud Dataflow with Python.
- Delivered dashboards and reports to support compliance, business intelligence, and sales strategy optimization.
- Working on the user feedbacks/sentiments related to Google products and creating reports based on the issues users are facing using Power BI.

Process Associate, Genpact India | 02/2013 - 08/2018

- Fixing issues raised by customers on websites.
- Helping the customers in hosting their websites on servers.
- Reporting and splashing the team performance via Lync and email.
