

GUDURU JYOTHI SWAROOP

Technology Leader | Platform Architecture | Product Engineering | Secure Digital Systems

📍 Hyderabad, India 📞 +91 91330 97779 ✉ imgj.3195@gmail.com
in [linkedin.com/in/swaroop-gj](https://www.linkedin.com/in/swaroop-gj) 🐙 github.com/ImGJUser1 🌐 Portfolio

Professional Summary

Technology leader with 8+ years defining and executing technology roadmaps, leading cross-functional engineering efforts, and delivering scalable, secure platforms aligned with business growth. Proven track record architecting end-to-end digital systems from product conception through production deployment, managing engineering teams, and translating business requirements into technical execution. Experienced building secure, compliant platforms with strong focus on system architecture, DevOps practices, cybersecurity, and operational excellence across fintech, insurtech, and enterprise domains.

Technology Leadership Highlights

- Defined system architecture and integration strategy for scalable digital platforms serving 10,000+ concurrent users
- Led cross-functional engineering collaboration across product, operations, marketing, and security teams
- Established best practices for CI/CD deployment, system reliability, data protection, and regulatory compliance
- Evaluated and onboarded technologies aligned with business scalability goals and technical debt management
- Mentored and scaled engineering efforts, driving team productivity and code quality standards
- Owned end-to-end delivery of secure payment systems processing 50,000+ monthly transactions
- Architected cloud infrastructure (AWS) with focus on cost optimization, performance, and security

Technical Expertise

Architecture & Design: System Architecture, Microservices, RESTful APIs, API Gateway Design, Distributed Systems, Event-Driven Architecture, Real-time Processing

Full-Stack Development: Node.js, React, FastAPI, Python, JavaScript, MERN/PERN Stack, WebSockets, Server-Side Rendering

Cloud & Infrastructure: AWS (EC2, Lambda, S3, RDS), Docker, Kubernetes, Infrastructure-as-Code, Serverless Architecture, Load Balancing, Auto-scaling

DevOps & Operations: CI/CD Pipelines, Git, Monitoring & Observability, Performance Optimization, Incident Management, System Reliability Engineering

Security & Compliance: Data Security, ISO Standards, RERA/GST Compliance, Authentication/Authorization, Secure Payment Processing, Audit Trails, PII Protection

Databases: PostgreSQL, MongoDB, Redis, Database Design, Query Optimization, Data Migration, Backup & Recovery

AI/ML Integration: LLM Integrations, Vector Search, Recommendation Systems, Real-time Inference, Model Deployment, Analytics

Product & Business: Product Roadmap Definition, Technical Feasibility Analysis, Build vs Buy Decisions, Stakeholder Management, Business-Tech Alignment

Professional Experience

Head of Growth & Development

Voiaxis Pvt. Ltd. (Jamme - Digital Social Platform)

May 2025 – Jan 2026

Hyderabad

- **Platform Architecture & Ownership:** Defined technology strategy and led execution for audio-first social platform; architected scalable real-time infrastructure supporting 10,000+ concurrent users with 99.9% uptime
- **Engineering Leadership:** Collaborated with MERN/PERN engineering teams to establish coding standards, deployment practices, and system architecture decisions; aligned technical roadmap with business growth objectives
- **Product Engineering:** Directed development of voice-centric UX features including onboarding flows, content discovery, and creator monetization tools; achieved 40% improvement in user retention through data-driven product decisions
- **Technical Infrastructure:** Owned integration of Web Audio API, real-time streaming protocols (WebSockets), Opus compression, and low-latency audio processing; ensured platform stability during 15% MoM user growth
- **AI Systems Integration:** Implemented embedding-based recommendation engine using vector similarity search for intelligent content discovery and personalization
- **Cross-functional Leadership:** Aligned engineering, marketing, operations, and creator teams around product vision, platform stability, and monetization readiness; facilitated communication between technical and business stakeholders

- **Analytics & Optimization:** Established KPI framework using Mixpanel; drove performance optimization and A/B testing for feature validation

Head of Growth & Product

Space Saving Solutions

2024 – May 2025

Hyderabad

- **Technology Strategy:** Defined and executed product-led growth strategy for infrastructure optimization platform; improved user activation by 35% through technical and UX improvements
- **Platform Development:** Directed end-to-end platform development including API design, database architecture, and third-party integrations
- **Operational Management:** Owned technical operations ensuring scalability, reliability, and performance; implemented monitoring systems and incident response protocols
- **Market & Competitive Analysis:** Conducted technical feasibility assessments for product features; evaluated build-vs-buy decisions for core capabilities
- **Partnership Development:** Managed technical aspects of vendor and stakeholder partnerships including API integrations and data exchange protocols

Co-Founder & COO

S.S. Constructions Pvt. Ltd.

Sep 2020 – Oct 2023

Hyderabad

Key Project: L&T X Keystone Infra (T-fiber Infrastructure, Nalgonda)

- **Strategic Technology Vision:** Defined company's digital transformation roadmap and operational technology strategy; led adoption of project management and financial systems
- **Operations & Governance:** Established operational processes, compliance frameworks (RERA, GST, environmental clearances), and quality standards; reduced project delays by 25% through systematic validation
- **Stakeholder Management:** Led high-level negotiations with banks, private equity, land-owners, and major clients; managed P&L and financial reporting
- **Contract & Compliance:** Reviewed and approved contracts, ensured regulatory compliance, and implemented risk management protocols
- **Team Leadership:** Built and mentored cross-functional teams; established company culture focused on integrity, safety, and quality

State IT Technical Delivery Lead

Life Cycle+ Pvt. Ltd.

May 2018 – Sep 2020

Melbourne, Australia

Enterprise Clients: ANZ Bank, DHHS Victoria, Department of Veterans' Affairs, Federal Courts

- **Enterprise Solution Delivery:** Led end-to-end delivery of SaaS/PaaS implementations and system integrations for high-profile enterprise clients; maintained 99.5% uptime across 5,000+ endpoints
- **Infrastructure Management:** Owned Melbourne City Council Data Center operations including server management, data migrations, and security implementations
- **Technology Leadership:** Directed Windows 10 rollouts, server upgrades, and IT infrastructure modernization projects; trained teams on advanced technologies and deployment strategies
- **Security & Compliance:** Ensured adherence to Australian ISO standards for data security; implemented advanced security protocols and audit compliance measures
- **Client Relationship Management:** Provided technical consulting to enterprise clients; translated business requirements into system architecture and implementation plans
- **DevOps & Automation:** Established deployment automation, monitoring systems, and incident management protocols

Key Technical Projects & Innovations

AGENT-V – Real-Time Conversational AI Platform

- **System Architecture:** Designed end-to-end conversational AI platform with microservices architecture: wake-word detection → speech recognition → LLM reasoning → response synthesis
- **Technical Leadership:** Defined technology stack (Python, FastAPI, PyTorch, TensorFlow Lite) and deployment strategy for edge and cloud environments
- **Performance Engineering:** Achieved sub-500ms end-to-end latency through optimization of inference pipelines, API design, and resource management
- **Privacy & Security:** Implemented privacy-first architecture with on-device processing and secure API communication
- **Technologies:** Python, FastAPI, PyTorch, TensorFlow Lite, ONNX Runtime, React Native, Docker, AWS

Health+ Secure Payments Platform

- **Platform Architecture:** Architected secure healthcare payments system handling 50,000+ monthly transactions with PCI-compliant infrastructure
- **Full-Stack Development:** Led development of RESTful API backend (FastAPI), database design (PostgreSQL), caching layer (Redis), and payment gateway integrations
- **AI Integration:** Implemented recommendation engine using collaborative filtering for personalized healthcare service matching
- **Cloud Infrastructure:** Deployed on AWS using Lambda (serverless), S3 (storage), EC2 (application hosting), and RDS (managed database)
- **Security & Compliance:** Implemented authentication/authorization, secure payment processing, audit logging, and data encryption
- **Technologies:** Python, FastAPI, PostgreSQL, Redis, AWS, Payment Gateway APIs, React

PROJECT FUSION-S – Distributed Intelligence System

- **System Design:** Architected distributed AI system combining edge hardware, mobile interface, and cloud backend with microservices architecture
- **API Design:** Designed RESTful APIs and gRPC services for inter-service communication; implemented WebSocket-based real-time streaming
- **Infrastructure:** Deployed using Docker/Kubernetes for container orchestration; established CI/CD pipelines for automated deployment
- **Data Architecture:** Implemented PostgreSQL for structured data, Redis for caching, and vector databases for AI-powered search
- **Technologies:** Python, FastAPI, Node.js, WebSockets, gRPC, Docker, Kubernetes, PostgreSQL, Redis, AWS

Kavacha LiteOS – Multilingual Security Platform

- **Platform Development:** Built multilingual AI platform supporting 12+ languages with offline-first architecture
- **Optimization:** Implemented model compression achieving 75% size reduction while maintaining performance; deployed using TensorFlow Lite and Core ML
- **Technical Innovation:** Developed on-device inference capabilities for privacy-sensitive applications
- **Technologies:** Python, TensorFlow Lite, PyTorch, Core ML, FastAPI, Mobile Frameworks

Open Source Contributions & Digital Products

- **@imgj.3195/memoria-client (NPM)** – JavaScript client library for distributed memory systems with vector search
- **memoria-tool (PyPI)** – Python toolkit for AI-powered knowledge management and RAG workflows
- **Omni Science** – AI research platform with semantic search and literature discovery capabilities
- **Ghostwriter AI** – Desktop automation tool using LLM-powered workflow optimization

Education

Master of Information Technology

Charles Sturt University
Specialization: Networking & Security

2016 – 2018
Australia

Bachelor of Engineering

Andhra University
Major: Electrical & Electronics Engineering

2009 – 2013
India

Leadership & Business Competencies

Technical Strategy

Experienced defining technology roadmaps aligned with business objectives; evaluating emerging technologies and making build-vs-buy decisions based on scalability and ROI.

Team Leadership

Proven ability mentoring engineering teams, establishing coding standards, and driving productivity through clear technical direction and collaborative culture.

Architecture & Scalability

Deep expertise designing distributed systems, microservices, and cloud infrastructure with focus on performance, reliability, and cost optimization.

Security & Compliance

Strong background implementing security best practices, regulatory compliance (ISO, RERA, GST), and data protection standards for sensitive applications.

Stakeholder Management

Skilled translating complex technical concepts for non-technical stakeholders; aligning engineering efforts with business priorities and customer needs.

Product Engineering

Experience driving product development from conception through launch; balancing technical feasibility, user experience, and business constraints.
